

Oil Shark® Containment Fence Installation Recommendations

Materials

Oil Shark® fence fabric standard roll dimensions:

- 4.0 oz (ounces per square yard)
- 40" width (*available in 30", 60" and 80"*)
- 600' roll length (*roll weight ~52 lbs.*)

Metal T- post:

- 6' in length or greater, depending on terrain and conditions
- Standard bailing wire
- Flat or wide tip wire cutters

Installation

- Drive T-post approximately 2 - 3 ft. in the ground and /or until it is secure
- Attach Oil Shark® fence fabric around 1st T-post making several wraps then secure with bailing wire.
- Bailing wire should be pushed or punched through fabric at the top, middle and approximately 4" from the mud line and the ends twisted and secured
- Be sure to bend the twisted wire ends down against the T-post once you have the fabric secured in place
- After the Oil Shark® fabric is securely fastened to the 1st T-post, stretch fabric to the next T-post and continue installation by using bailing wire to attach fabric to top, middle and bottom of T-post.
- Spacing between T-post is generally 4 - 6 ft. apart (*spacing can vary depending on site conditions*)

With proper installation, Oil Shark® fence fabric is a highly effective containment and filtering tool to contain and remove a broad range of hydrocarbons and pollutants.
